LinkedIn: <https://www.linkedin.com/in/thien-pham-14777033b/>

Posts and Telecommunications Institute of Technology (2022 – 2027) – Information Technology, 4th-year student.

*Aspiring Unity Game Developer with strong foundation in OOP and **algorithmic thinking** (ICPC background). Experienced in building gameplay systems using Unity, including character control, UI, and game architecture (MVC, FSM). Proficient in C#, **SOLID principles**, and **design patterns**.*

SKILL

- **Game Development:** Unity (2D/3D), Android/PC deployment, UI/UX.
 - **Languages:** C#, C++ / Python.
 - **Programming & Architecture:** OOP, SOLID, Clean Code, Design Patterns (MVC, State Machine, Observer, Singleton, Object Pool), FSM, ScriptableObject, DOTween.
 - **Collaboration & Tools:** Git/GitHub, version control, Team collaboration, task sharing, code review.
 - **English:** Reading/Listening – Intermediate (TOEIC 840+); Speaking/Writing – Basic.
-

EXPERIENCE

Game Developer (Full-time Collaborator) – Garena

[03/2026 – 04/2026]

- Developed gameplay features using Craftland Editor.
 - Implemented and optimized game systems (e.g., UI, gameplay mechanics, event handling).
 - Debugged and fixed in-game issues to improve stability and performance.
 - Collaborated with team members using Git in a production environment.
 - Worked within an existing codebase and followed team coding standards.
-

PROJECT

Girl Rescue (Unity – Puzzle) – PERSONAL PROJECT

<https://github.com/Thiendeptrai169/Girl-Rescue>

- Developed a Unity puzzle prototype where players release colored arrow blocks, load matching cannon ammo, and destroy dragon segments before they reach the princess.
- Built a data-driven level system using ScriptableObject, with each level stored as a reusable LevelConfig asset.
- Created a custom Level Editor Tool for designers to create, edit, validate, save, duplicate, and playtest levels directly inside Unity.
- Applied EC architecture, Observer/Event System, Singleton managers, Object Pooling, and ScriptableObject-based configuration.

Self: Under The Smile (Game Jam 2026 – Unity) – TEAM PROJECT

<https://github.com/vudkhoea/GlobalGameJam2026>

- Developed a rhythm mini-game (Osu-like) as part of a 4-mini-game project.
- Implemented gameplay using EC architecture and State-based logic.
- Applied Data-driven design to manage gameplay configuration and behavior.
- Used Object Pooling to optimize performance for spawning notes.
- Integrated DOTween for smooth animations and visual feedback.
- Collaborated in a fast-paced Game Jam environment with tight deadlines.

Speak Up! (Unity – Visual Novel) – PERSONAL PROJECT

<https://github.com/Thiendeptrai169/My-Visual-Novel-Game>

- Implemented dialogue system, cutscenes, and scene transitions.
- Applied clean architecture using Singleton, ScriptableObject, and MVC pattern.

- Used DOTween for UI animations and transitions.

CERTIFICATES AND AWARDS

- Programming Competitions: 2nd Place – ICPC (PTIT HCMC Campus, 2023).
- Academic Excellence: GPA 3.1/4.0 with one scholarship.

ACTIVITIES

- Head of Programming – ITMC Club (PTIT HCMC)
- Led a team of 30 members in programming-related activities and projects
- Coordinated task distribution and supported team collaboration.
- Organized “TechSolve” – a campus-wide technical challenge for PTIT students.
